

CLINICIAN REVIEW OF AN ORTHODONTIC TREATMENT PLAN AND APPLIANCE

ABSTRACT OF THE DISCLOSURE

5 A computer is used to create a plan for repositioning an orthodontic patient's
teeth. The computer receives an initial digital data set representing the patient's teeth at their
initial positions and a final digital data set representing the teeth at their final positions. The
computer then uses the data sets to generate treatment paths along which teeth will move
from the initial positions to the final positions.
